

## H6D Firmware

In a firmware release for **H6D** that is planned for **mid April**, the following functions will be added:

- Technical Camera Support: Flash Sync
- Technical Camera Support: Pin hole
- Over-exposure warning
- Focus peaking in Live View mode
- Firmware update of camera body (CBC) via CIM file
- Full HTS support (including info on camera)
- Show histogram on grip display
- Reduction of power consumption in Tethered mode
- Language updates (corrections)
- Improved stability (mainly card handling)
- High priority bugs
- Standby/sleep mode locking out buttons, displays and sensor off (but power still on) with short press of power button

The release after this is not yet planned in time but will focus on the following functions:

- Improve error handling
- Support power via USB
- CF Adapter Support
- Additional Technical Camera Support
- Set color temp based on gray capture
- Tethered: Browse memory card from Phocus
- Image Rating Support
- Profile Support
- Advanced options for image storing (Backup + more)
- Audio Notifications
- Improved HDMI Support
- Tethered: Camera configuration support from Phocus
- Create/Remove folder support
