

Hasselblad **Nov 18, 2013**

Camera body Firmware version 131031.hbf

This package contains firmware version 9.5.1/1.1.1 for the H1, H1D, H2 and H2F camera bodies

Changes since version 9.5.0/1.1.0

- Support for the 3043356 Battery grip rechargeable 2900 / Li-Ion

Installation

The update should preferably be made by an authorized Hasselblad service centre but can also be made using the following procedure.

In order to perform the update a compatible digital capture unit must be attached to the camera body. Compatible models are: Hasselblad CF, CFH.

Remove lens and viewfinder and connect the camera to the host computer using a FireWire cable. Make sure the computer has a fresh battery or is powered from the mains supply. Start Phocus and when the camera is connected, as indicated by an active camera icon in the top left part of the screen, select "Update Firmware..." from the "File" menu. Browse to the location where the update file was saved and follow the instructions on screen. The update procedure will take a few minutes to finish.

Limitations

Please use the latest version of Phocus for firmware updating (Currently 2.7.5 (Mac)/2.7.5 (Windows)). For Windows it is strongly recommended to use the 64 bit version.

Use a computer with a powered FireWire cable for the update.
