

## **Phocus Quick 1.2.3 PC read-me**

March 27th 2014

### **Compatibility**

Windows 7 64 bit and Windows 8 64 bit.

### **Supported Products**

Images from all FireWire based Hasselblad camera units are supported.

### **General Features**

Phocus Quick offers automatic import and processing of your Hasselblad files, directly into your preferred image application. The import provides you with a set of easy-to-use images (JPEG's or DNG) for immediate viewing, printing or sending to others.

Phocus Quick can provide a backup of the image files in very high quality: Hasselblad 3F RAW file format. Before deleting any images from a CF-card, it is strongly recommended that you make this backup to allow for the producing of maximum quality images in the future.

When the dialog informs you the process is complete, the finally-processed images can be found in the computer's default image folder, Pictures/Phocus Captures or your preferred folder if you made another selection.

Imported JPEG images are saved in folders named after the chosen JPEG quality - e.i. "JPEG Full Size", "JPEG Medium Size" or "JPEG Fast Preview". The folders automatically created by Phocus Quick are properly localized to the languages supported.

When scanning CF-cards in the card reader Phocus Quick will exclude images already found in the destination folder from import. Import directly from CF cards mounted in a Hasselblad camera is not supported in Phocus Quick.

### **News in 1.1**

#### Choose destination

Previously the destination folder was locked to 'Phocus Captures' folder inside the Pictures folder. You can now change the destination to one of your own choice.

### **News in 1.2**

This version also supports H5D

#### **Changes 1.2.1**

Chinese language update  
Improved H5D color handling  
Improved H5D noise reduction of high ISO images

#### **Changes 1.2.2**

Support for H5D60

#### **Changes 1.2.3**

Support for H5D50c
